

Garv Garg

+91 9258675844 — cloudwithgarv@gmail.com — [LinkedIn](#) — [GitHub](#)

Technical Skills

Cloud & Infrastructure	: AWS, Terraform, Docker, Kubernetes, Linux, Ansible
Programming	: Python, Bash, SQL, Golang
DevOps & Automation	: Git, GitHub, GitHub Actions, Jenkins, CI/CD Pipelines
Cloud Security	: IAM, CloudTrail, GuardDuty, CloudWatch, Security Groups, SSL/TLS
Monitoring & Observability	: Prometheus, Grafana
Networking	: TCP/IP, DNS, VPN, Routing, Firewall Concepts, Wireshark

Projects

Secure AWS Infrastructure using Terraform

2026

AWS, Terraform, VPC, EC2, RDS, IAM, ALB, CloudWatch

- Designed and deployed a highly available multi-tier AWS infrastructure using Terraform, provisioning VPCs, public/private subnets, EC2 instances, RDS databases, and Application Load Balancers.
- Implemented Infrastructure as Code (IaC) practices, reducing manual provisioning effort and enabling repeatable, version-controlled deployments.
- Configured IAM roles, Security Groups, and network segmentation to enforce least-privilege access and strengthen cloud security posture.
- Integrated CloudWatch monitoring and logging to improve infrastructure observability and operational visibility.
- Developed reusable Terraform modules to standardize infrastructure deployment across environments.

Cloud SIEM & Threat Detection Platform

2026

AWS CloudTrail, CloudWatch, GuardDuty, Lambda, SNS

- Built a cloud-native Security Information and Event Management (SIEM) solution leveraging AWS CloudTrail, GuardDuty, and CloudWatch.
- Automated detection of suspicious activities including unauthorized API calls, privilege escalation attempts, and root account access events.
- Developed AWS Lambda functions to process security events and trigger real-time alert notifications via SNS.
- Implemented centralized log collection and monitoring to enhance threat visibility and incident response capabilities.
- Reduced mean time to detection (MTTD) through automated security event correlation and alerting workflows.

DevSecOps CI/CD Pipeline

2026

Jenkins, GitHub Actions, Docker, SonarQube, Trivy, Kubernetes

- Developed an end-to-end DevSecOps CI/CD pipeline integrating automated code quality checks, vulnerability scanning, and deployment workflows.
- Integrated SonarQube for static code analysis and Trivy for container vulnerability assessment, strengthening application security.
- Automated Docker image build, testing, and deployment processes using Jenkins and GitHub Actions.
- Implemented continuous delivery to Kubernetes clusters, reducing deployment time and minimizing manual intervention.
- Enforced security gates within the CI/CD pipeline to prevent vulnerable code and images from reaching production environments.

Certifications

AWS: Cloud Practitioner, AI Practitioner, Solutions Architect - Associate, CloudOps Engineer - Associate

Oracle: Database@AWS Certified Architect Professional

Cisco: Networking Essentials

Education

Chandigarh University

Aug 2023 – May 2027

B.E. in Computer Science & Engineering, Honours in Cloud Computing

Relevant Coursework: Cloud Architecture, Network Security, Distributed Systems, Operating Systems, Database Systems, Linux Administration
